

Umbrella Operating Instructions

- 1-**Remove all packing from umbrella.
Remove plastic cover bag & bubble wrap inside and around frame.

- 2-**Insert and secure umbrella into appropriate base.

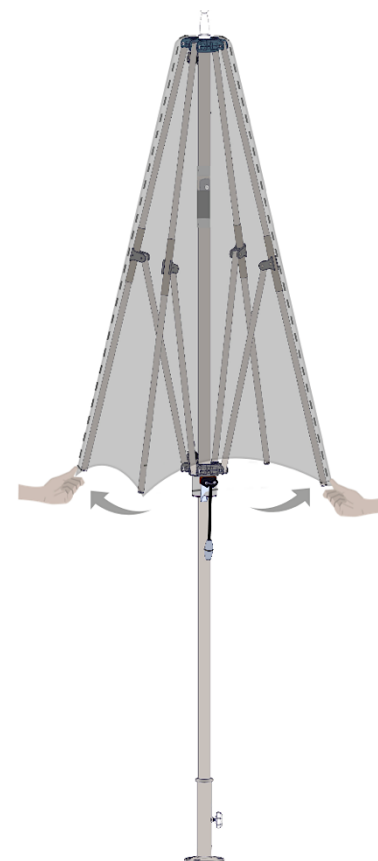

A-Above ground base

B-In-ground flush mount

- 3-**Gently separate each rib from center pole, approximately 4-8 inches. If rib does not move easily, do not force.
- 4-**Once the ribs have been separated, raise the hub gently. Do not force the hub if it does not raise easily. Inspect umbrella for additional packaging.

Umbrella Operating Instructions

Proper care and service is recommended to extend the life of your umbrella. We recommend the following:

- The umbrella **MUST** always be securely anchored to one of our suggested bases using the bolt on the base.
- Prior to opening, ensure that the shade product is properly secured to an adequate shade anchor system.
- When closing the umbrella, pull the fabric out from between the struts to avoid pinching or damaging the canopy.
- We recommend that all collapsible shade equipment be closed in wind conditions that exceed 15MPH.
- We recommend opened umbrellas be placed 12 inches apart. Do not place umbrella panels on top of each other.
- Canopy should be cleaned regularly and can be cleaned without being removed from the frame. Hose down and clean with mild soap and lukewarm water (no more than 100°F), using a soft bristle brush. Rinse thoroughly to remove soap. Allow fabric to dry.
- Fresh water rinses once a week.
- Do not use pressure washer to clean canopies.
- Weekly inspection of your umbrella is recommended. Loose screws should be tightened and any broken components replaced immediately to avoid further damage to your umbrella.
- Check bolts in security stem regularly to ensure that they remain fully tightened.

Failure to properly secure the umbrella may result in damage, injury, or voiding of warranty.
